

Wellness & Longevity

Advantage Imaging

CDC is your dedicated partner in a precision medicine approach focused on promoting and protecting your wellness and longevity.

Utilizing advanced medical imaging, our comprehensive approach to total body assessment provides you state-of-the-art reassurance and preventative care opportunities.

Our standard scan protocol takes approximately two hours to complete with breaks, and includes:

- MRI of the brain: examination for tumors, prior stroke, prior trauma, brain degeneration, atrophy, and inflammatory conditions such as MS.
- MRI of the neck: examination for tumors and nodules. Follow-up ultrasound is often required.
- MRI of the spine: examination of the full spine for tumors, prior trauma, inflammation, and age-rated degeneration including bulging discs and arthritis.
- CT of the lungs: examination for lung cancer, aneurysms, emphysema, and chronic infection.
- CT of the heart: coronary artery calcification scoring is an advanced technique to assess your risk of heart attack beyond what's possible with standard approaches.
- MRI of the abdomen: examination for fatty liver, aneurysms, and exclusion of gallstones, as well as for tumors of the liver, pancreas, spleen, kidneys, adrenal glands, or lymph nodes.
- MRI of the pelvis: generalized examination for unexpected tumors or lymph node enlargement, and in women further examination for signs of cancer or other diseases of the uterus and ovaries.

We additionally recommend consideration of these optional preventative services:

- Screening Mammography for all women age 40+, plus Breast MRI for women with dense breast tissue and a strong family history of breast cancer;
- CT virtual colonoscopy in patients 50+ without a recent colonoscopy to screen for colon cancer;
- Dedicated Prostate MRI for men 40+ to screen for prostate cancer;
- Ultrasound of the scrotum to exclude testicular cancer.

Exceptional patient care
for a **healthier you**
